

+ About us

UNIK has 40-year experience in suture industry and is the only company in Taiwan with a factory to manufacture silk sutures. We focus on markets of Taiwan and China. UNIK has headquarters and own plants in Taiwan. We also had plants in China to support our China business. We set up the China branch office in Beijing in 2001 and now we have around 70 distributors in China. Moreover we set up another new office in Shanghai in the year of 2007.

Unik is a GMP factory approved by the Ministry of Health of Taiwan; Unik also has ISO 13485 certification that conform to the Quality Management System Standard. We received CE certificate for non-absorbable and absorbable surgical sutures.

Our sutures are in good quality with high tensile strength offered at a competitive price. We supply public and private hospitals and clinics in Taiwan. We have been exporting worldwide over the past 20 years, including countries in Southeast Asia, the Middle East, Europe, New Zealand, and China.

Product

Sutures Materials

EU-TEK (PGA)

+ The sutures are made of glycolic acid and with braided structure. The sutures have some benefits as below, minimal tissue reaction, excellent knot security, predictable strength over the critical wound healing period, and soft passage through the tissues with minimal sawing, tissue drag and traumatism. The absorption of the sutures can complete in approximately 60 to 90 days. The sutures are indicated for use as absorbable sutures in general soft tissue approximation and/or ligation, including use in ophthalmic procedures.

p. 4

EU-TEK (PGA)

+ The sutures are made of glycolic acid and with braided structure. The sutures have some benefits as below, minimal tissue reaction, excellent knot security, predictable strength over the critical wound healing period, and soft passage through the tissues with minimal sawing, tissue drag and traumatism. The absorption of the sutures can complete in approximately 60 to 90 days. The sutures are indicated for use as absorbable sutures in general soft tissue approximation and/or ligation, including use in ophthalmic procedures.

p.16

Plain Catgut

+ Plain Catgut is a uniform, firmly twisted strand of collagen made of the serosa layer of bovine intestines. The purified strands, after electronic gauging and polishing, form a virtual monofilament with exceptional handling properties. It is indicated for use in general soft issue approximation and/or ligation, including use in ophthalmic surgery.

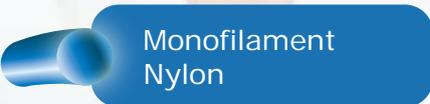

p.26

Chromic Catgut

+ Chromic Catgut has been treated to provide a considerably longer period of absorption than Plain Catgut. The rate of absorption is lowered down by chromic process. It is well beyond critical postoperative period and twice the stitch holding time of Plain Catgut. It is indicated for use in general soft issue approximation and gastrointestinal surgery.

p.30

Monofilament Nylon

+ Monofilament Nylon sutures are inert, nonabsorbable, sterile sutures composed of the long-chain aliphatic polymers Nylon 6.6. They elicit a minimal acute inflammatory reaction in tissue, which is followed by gradual encapsulation of the suture by fibrous connective issue. They are indicated for use in general soft issue approximation and/or ligation, including use in ophthalmic and neurological surgery.

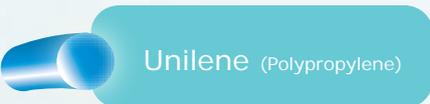

p.36

Braided Nylon

+ Braided Nylon sutures are inert, nonabsorbable, sterile sutures composed of the long-chain aliphatic polymers Nylon 6.6. They are braided to enhance handling characteristics, ease of passage through tissue and reduction of capillarity. They have some benefits as below, a tight braid with a uniform diameter, maximum flexibility of the strand and excellent and consistent knotting strength.

p.46

Unilene (Polypropylene)

+ The sutures (clear or pigmented) are inert, nonabsorbable, sterile sutures composed of a crystalline stereoisomer of polypropylene. The sutures are pigmented blue to enhance visibility. The sutures are indicated for use in general soft issue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurological surgery.

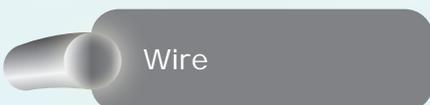

p.50

Polyester

+ Polyester sutures are nonabsorbable, sterile, surgical sutures composed of polyethylene. The sutures are available uncoated or coated to increase surface lubricity, thereby enhancing handling characteristics, ease of passage through tissue, and knot run-down properties. The sutures are indicated for use in general soft issue approximation and/or ligation, including use in ophthalmic and neurological surgery.

p.56

Wire

+ The sutures are composed of corrosion resistant steel and gamma-ray sterilized. The sutures meet all requirements established by U.S.P and E.P. for nonabsorbable surgical sutures. The sutures are indicated for use in abdominal wound closure, intestinal anastomosis, hernia repair and sternal closure.

p.62

Silk

+ The sutures are braided, nonabsorbable, sterile, non-mutagenic surgical sutures composed of natural silk fibers called fibroin. The sutures elicit a minimal acute inflammatory reaction in tissue, which is followed by gradual encapsulation of the suture by fibrous connective issue. The sutures are indicated for use in general soft issue approximation, including use in microsurgery and neurological surgery.

+ EU-TEK

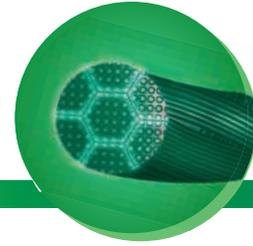

+ French Version

- Suture synthétique à absorption tressé ou monofilament, fait de acide glycolic.
- Excellent résistance à la traction pendant le periode critique de la cicatrisation.
- Calibre Uniforme.
- L'absorption est completé entre 60 et 90 jours.
- Stérilisation à oxide d'éthylène.

+ Italian Version

- Sutura sintetica assorbibile intrecciata e monofilamento composta, dall' omopolimero dell' acido glicolico.
- Eccellente resistenza tensile nel periodo critico di cicatrizzazione.
- Minima frizione tessutale.
- Calibro uniforme.
- L'assorbimento inizia con una piccola perdita di resistenza tensile e si completa tra 60 e 90 giorni dopodiché viene tutto metabolizzato dall'organismo.
- Sterilizzazione ad ossido di etilene.

+ EU-TEK

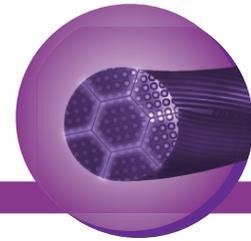

+ French Version

- Suture synthétique à absorption tressé ou monofilament, fait de acide glycolic.
- Excellent résistance à la traction pendant le periode critique de la cicatrisation.
- Calibre Uniforme.
- L'absorption est completé entre 60 et 90 jours.
- Stérilisation à oxide d'éthylène.

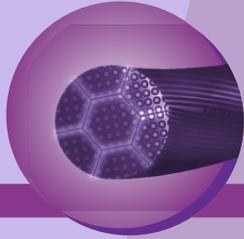

+ Italian Version

- Sutura sintetica assorbibile intrecciata e monofilamento composta, dall' omopolimero dell' acido glicolico.
- Eccellente resistenza tensile nel periodo critico di cicatrizzazione.
- Minima frizione tessutale.
- Calibro uniforme.
- L'assorbimento inizia con una piccola perdita di resistenza tensile e si completa tra 60 e 90 giorni dopodiché viene tutto metabolizzato dall'organismo.
- Sterilizzazione ad ossido di etilene.

+ PLAIN

+ CHROMIC

+ French Version

- Suture à absorption fait de collagène (intestin bovine).
- Purifié avec lavages et des systèmes électroniques.
- Au contraire du "Plain Catgut" cette suture est chromatisé pour avoir une absorption plus tardive.

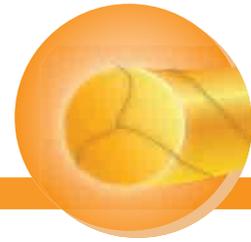

+ Italian Version

- Sutura molto resistente derivato da collagene di strati di sierosa dell'intestino bovino.
- Purificata con lavaggi e sistemi elettronici.
- Al contrario del catgut semplice il cromico ha un riassorbimento molto più lungo nel tempo per il processo di cromatura applicato.

Catgut Suture

+ Chronic Catgut

+ NYLON

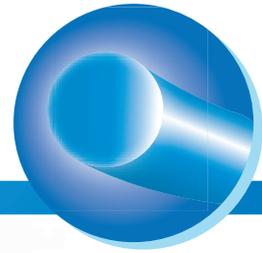

+ French Version

- Suture synthétique non résorbable monofilament fait d'une chaîne aliphatique de polymères nylon 6.6.
- Très bonne flexibilité et excellente tenue à la suture.
- Le nylon monofilament est indiqué surtout en ophtalmologie, en neurochirurgie et en chirurgie plastique.

+ Italian Version

- Sutura sintetica non assorbibile monofilamento composta da una catena alifatica di polimeri nylon 6.6.
- Ottima flessibilità ed eccellente tenuta del nodo.
- Minima sensibilizzazione nei tessuti seguita da un progressivo incapsulamento della sutura dal tessuto connettivo fibroso.

+ French Version

- Suture naturelle non résorbable, tressé fait des filaments protéiques de soie (vers à soie).
- Les filaments de soie sont purifiés et après sont lambrassé avec cire vierge pour réduire la capillarité.
- Est indiqué en chirurgie general, ophtalmologie, chirurgie plasticque, etc, etc.

+ Italian Version

- Sutura non mutagenica composta da fibre proteiche di seta denominate fibroina. Questa proteina è derivata da bachi da seta della specie Bombyx-Mori.
- Le fibre di seta sono trattate purificate, intrecciate e rivestite di cera, per ridurre la capillarità.
- minima entità di sensibilizzazione nei tessuti seguita da un progressivo incapsulamento della sutura del tessuto connettivo fibroso.

* USP The limits on knot-pull tensile strength apply to nonabsorbable surgical suture that has been sterilized. For non-sterile of Class I and Class II, the limits are 25% higher the tensile strength of each size Larger than I/O monofilament class III is measured by straight pull.

** Silk (JIS Standard) listed Knot-Pulling Standard is Non-Sterile Standard.
